Code Layout Checklist :

S.No	Code Quality Parameter	Description	Followed (Yes/No/Partial)	Remarks
1	Consistent Indentation	Uniform spacing and proper indentation throughout the project	Yes	Maintained using Python and HTML standards
2	Proper File Structure	Files and folders are logically organized	Yes	Templates, Static, Model, Dataset separated

S.No	Code Quality Parameter	Description	Followed (Yes/No/Partial)	Remarks
3	Meaningful Variable Names	Variables clearly represent their purpose	Yes	Descriptive variable names used
4	Function / Method Names	Functions are clearly named based on functionality	Yes	Follows Python naming conventions
5	Code Comments	Important sections are documented	Yes	Comments added for readability
6	Modular Design	Code divided into reusable modules	Yes	Flask routes, ML model, templates separated
7	No Redundant Code	Duplicate code avoided	Yes	Reusable functions implemented
8	Error Handling	Handles invalid user inputs and prediction errors	Yes	Input validation and exception handling added

Reusable Components / Modules :

SNo	Component / Module Name	Language / Technology	Where Reused	Reusability Level
1	app.py	Python (Flask)	Handles routing and prediction	High
2	crop_model.pkl	Scikit-learn	Crop prediction	High
3	style.css	CSS	Used across all webpages	High
4	base HTML layout	HTML, Bootstrap	Shared webpage structure	Medium
5	prediction function	Python	Used for processing user inputs	High

Overall Code Quality Assessment :

Aspect	Rating (1–5)	Comments
Code Layout & Structure	5	Well-organized project structure
Readability	5	Easy to understand and maintain
Reusability	5	Modules reused across the application
Documentation / Comments	4	Sufficient comments provided
Error Handling	4	Handles invalid inputs and runtime exceptions
Overall Quality	5	Clean, modular, and maintainable implementation
